

Solutions by Garaventa Lift

- Model:** GSL Artira
Project Name: Kennesaw Mountain High School
Location: Kennesaw, Georgia
Installation Date: 2012
Description: Due to the existing stair layout, this lift was designed with the tube system located next to the outside wall of the stairway. These applications are quite rare. Usually, the tubes and towers are located next to the inside wall. This lift also features a full time battery-powered auxiliary power system next to the drive box.
