

# Solutions by Garaventa Lift

**Model:** Home Elevator

**Project Name:** Whistler Residence

**Location:** Whistler, B.C.

**Installation Date:** 2009

## **Description:**

This home elevator has custom wenge and bamboo walls. These were added on-site by the project finishing carpenter to match the exotic interior of the house. When the elevator was installed, it had unfinished mdf walls.

A panel was also installed to block access to the space above the cab when the landing door is open. This is required by code when the cab is a standard seven-foot height, but the doors are taller.
